CONNECT**

[Click here](#) and listen the latest installment of our AudioConnect series with *Dimensions* Editor in Chief, Anna M. Pattison as she discusses the latest trends in instrumentation including miniaturization, diamond tips and endoscopy. Part 3 goes live in April 2009.

Identafi™ 3000 Multi-Spectral, Oral Cancer Screening System

Trimira™ LLC has introduced Identafi™ 3000, a small, cordless, handheld device that is the newest weapon to detect oral cancer. The device uses a three-wavelength optical illumination and visualization system to allow dental professionals to catch early cancers not visible to the naked eye. This effective and affordable device is the next generation in early detection of oral cancer, which has reached epidemic levels, due in part to the rise in HPV and the lack of effective, broad-based early detection programs.
